Package 'MisRepARMA'

October 12, 2022

Type Package

Title Misreported Time Series Analysis

Version 0.0.2

Date 2021-07-14

Encoding UTF-8

Maintainer David Moriña Soler <dmorina@ub.edu>

Description Provides a simple and trustworthy methodology for the analysis of misreported continuous time series. See Moriña, D, Fernández-Fontelo, A, Cabaña, A, Puig P. (2021) <arXiv:2003.09202v2>.

Depends R (>= 3.5.0), mixtools, boot, tseries

License GPL (>= 2)

NeedsCompilation no

`MisRepARMA-package` *Misreported time series analysis*

Description

Provides a simple and trustworthy methodology for the analysis of misreported continuous time series. See Moriña, D, Fernández-Fontelo, A, Cabaña, A, Puig P. (2021) <https://arxiv.org/abs/2003.09202v2>.

Details

Package:	MisRepARMA
Type:	Package
Version:	0.0.2
Date:	2021-07-14
License:	GPL version 2 or newer
LazyLoad:	yes

The package implements function `fitMisRepARMA`, which is able to fit an ARMA time series model to misreported data, and the function `reconstruct` which is able to reconstruct the most likely real series.

`fitMisRepARMA` *Fit ARMA model to misreported time series data*

Description

Fits an ARMA model to misreported time series data.

Usage

```
fitMisRepARMA(y, tol, B, p_AR, q_MA, covars=NULL, misReport="U", ...)
```

Arguments

`y`	a numeric vector or time series giving the original data.
`tol`	tolerance limit to stop the iterative algorithm.
`B`	the number of bootstrap series to compute.
`p_AR`	order of the AR part.
`q_MA`	order of the MA part.
`covars`	matrix of explanatory variables. Its default value is `NULL`.
`misReport`	direction of misreporting issue. Its default value is `U` for underreported data, can also take the value `O` for overreported data.
`...`	additional arguments to pass to `tsboot`, for instance those regarding parallelization.

Details

The model based resampling scheme with `B` bootstrap resamples is computed. This

Value

An object of class `fitMisRepARMA` with the following elements is returned:

- `data`: The original time series.
- `t0`: The results of applying statistic to the original series.
- `t`: Estimates on each replicated time series.
- `call`: The original call to tsboot.

MisRepARMA-package, reconstruct

Examples

```
### Simulate underreported time series data
set.seed(12345)
x <- arima.sim(model=list(ar=0.4), n=50)
ind <- rbinom(50, 1, 0.6)
y <- ifelse(ind==0, x, x*0.3)
mod <- fitMisRepARMA(y, 1e-6, 3, 0.05, 1, 0, covars=NULL, misReport="U")
```

---

reconstruct *Reconstruct the most likely series*

Description

Reconstructs the most likely series.

Usage

```
reconstruct(object)
```

Arguments

object	object of class fitMisRepARMA.

Value

the function returns a vector of the same length of data containing the reconstruction of the most likely series.
